

Audio Visual Design Group has worked for Ms. Van Wagner since early 2006 when we were originally contracted to diagnose and service the existing audio visual system in her San Francisco Penthouse. Since that time, AVDG has completed several projects for Ms. Van Wagner including a major remodel to her Penthouse and an additional residence in Sonoma.

The Penthouse system featured multiple HD video displays and distributed audio throughout the home controlled by custom programmed universal remotes. Our goal was to minimize the impact of technology on the aesthetics of the residence by concealing the equipment within mill work, using architectural speakers in the ceilings and mounting thin flat panel TVs inside custom cabinetry or recessed into the wall as seen below.

### Client Testimonial:

"I first met Bob when he was working with his former company and was so impressed with him I followed him when he started AVDG. I have had the pleasure of working with him on my Sonoma home and twice in my apartment at the Four Seasons. He and everyone I have come in contact with at AVDG have been professional, knowledgeable and very easy to work with. I highly recommend Bob and AVDG to anyone needing Audio Visual work done."
